

## Agenda Item: Developing International Legal Frameworks for the Use of Artificial Intelligence

Artificial Intelligence is a problem for many countries but it's also a great thing to solve critical problems in a country. Artificial Intelligence can cause problems but it solves problems too. But is that always safe to use Artificial Intelligence? The answer is, no. Sometimes, it can show you lies and cause problems.

### Proposed solutions

#### 1. Learning things is easier

When you write something on AI, it gives you a fast answer about it. Denmark developed the AI in their country and we improved a new computer with AI named " Gefion " .

#### 2. Raise awareness the people

We present presentations at schools about Artificial Intelligence and how to use it safely and how to develop themselves about it. Using Artificial Intelligence for good things can be beneficial and helpful.

#### 3. Artificial Intelligence at school

As Denmark, we think that Artificial Intelligence can be so useful at school. For example writing articles can be easier with Artificial Intelligence. But of course, we should make sure that the students don't cheat during exams.

#### 4. Protecting the privacy of personal data

AI can be so useful but while you are using it, it takes your personal data and it can use it against you or it can send to somewhere you don't want.

So, you should be careful and try not to tell your personal data to AI. We can put a password on our personal AI account.

## Conclusion

In conclusion, the Artificial Intelligence can be a big problem or can solve the problem. It's about the side we choose. So, we have to learn how to use the Artificial Intelligence safely and be careful.
