

Country: People's Republic of China

Committee: Disarmament & International Security (DISEC)

Agenda Item: The regulation of Chemical Weapon possession and usage

Delegate: Bora ARAL

People's Republic of China is opposed to proliferation of weapons of mass destruction and their delivery means. While China has established a force of itself to protect its national independence, sovereignty and territorial integrity she still is and stands by following "No First Use" policy, and regards the weapons as means of peacekeeping and preventing of wars. Our policy is always in favor of world peace.

People's Republic of China as a member of executive council of OPCW, supports international security and disarmament outlined in the OPCW. The OPCW serves as a critical convention for reducing and prohibiting the development, produce, and use of chemical weapons. Over 190 States, including People's Republic of China, have ratified or acceded to this crucial treaty. Despite the progress, the World can see the current usage and production of chemical usage in Syrian Civil War and Israel – Palestine War.

This kind of weapons firstly used in critical ways at the time of WW1. That time we saw the consequences of usage of chemical weapons in humans' health and integrity of nature. The aforementioned weapons also obtained or produced by terrorist organizations. China is deeply concerned about the proliferation of chemical weapons in the hands of non-state actors and recognizes the urgent need for a collective response to address this threat. China supports that the authority of OPCW's should be increased by the signatory states.

During the Israeli-Palestinian war, we clearly see that we need to expand the membership of the OPWC and establish a strong investigative team to prohibit stockpiling and prevent the production of new chemical weapons. Furthermore, this kind of weapon used by terrorist organizations and member states which is capable of producing chemical weapons should regulate and control their production of raw materials needs to produce a chemical weapons. In conclusion, member states which has chemical weapon stocks needs to exterminate their stocks in a safe way.
