

**Committee: UNWOMEN**

**Agenda Item: Medical Negligence of Women**

**Country: Indonesia**

**Delegate: Elif Benan Demircioğlu**

As Indonesia, we think that our topic is really important in this committee. Sadly, women all around the world are suffering from neglect in medical care and struggling with the upsetting results of it. Republic of Indonesia is a country with over 279 million people. This means that every single move we make affects 279 million people. When things are like this, our aim is to make movements which will affect our people positively and to keep all our women at piece in the field of health.

At the moment, Indonesia has 2667 hospitals. We know that it is not enough and we are working hard and developing faster than ever. In a speech that our minister of health did recently it has been emphasized that the Indonesian health system reform process is planned to continue rapidly, and that there will be a decrease in the number of Indonesian citizens going abroad for treatment.

As you know, %87 of Indonesia identifies themselves as Muslim. So, we want to tell you about 'Islamic Social Work Practice: Experiences of Muslim Activities in Indonesia'

The goal of this paper is to explore and record Indonesian Muslim activities in helping individuals, families and community to fulfill their needs and address their problems. And among these needs, of course there is health problems and thanks to this application, they can be solved.

As Indonesia, we believe and support that medical negligence of women should end as soon as possible. Thanks to this prestigious conference we are hoping to find proper solutions with other countries.
