

Country: The United Kingdom

Committee: UNFCCC

Topic: Increasing the Use of Renewable Energy in Developing Countries

School: İstek Denizli Schools

The United Kingdom (UK) is located in Northwestern Europe. The Kingdom only borders Ireland. The United Kingdom has a population of around 69.1 million. The capital of the United Kingdom is London. The currency of the United Kingdom is the pound sterling. The United Kingdom GDP is estimated to be approximately \$3.59 trillion USD, with a GDP per capita of around \$52,423 USD, which makes it the sixth-largest economy.

We, as the United Kingdom, believe that renewable energy is a necessity in developing countries, and its use needs to increase urgently, and if the UN does not take action, it will lead to major problems, which are economic crises and global issues. If renewable energy use is not urgently increased in developing countries, the emergence of national crises and problems in the future is highly likely.

As a member of Sustainable Development Goals (SDGs), which includes goals such as Affordable and Clean Energy (Goal 7) and its sub-goals. This means we would like to fully support developing countries and are ready to take steps forward. The United Kingdom began its renewable energy journey in the 1980s, but significant strides were made in the early 2000s when policies and investments were introduced to support clean energy.

We as the United Kingdom would like to fully help developing countries. First, a solid infrastructure is required for renewable energy. As a solution, a small amount of funding can be collected from UN countries, and technological support can be provided for a solid infrastructure in developing countries. On the other hand, we can help by conducting research on new technological devices and providing technological device support. In this way, the use of renewable energy in developing countries can increase significantly, and a sustainable world can be created. We, as the United Kingdom, would like to fully support and find new solutions.
