

Country: The Islamic Republic of Pakistan

Topic: Food insecurity in Pakistan

Agenda Item: Combating food insecurity and risk of famine

Pakistan is in the Asian continent and country's border neighbors are : China, India, Iran and Afghanistan. Pakistan's population is 235 million and eight hundred thousand and In Pakistan about 70 percent of exports are directly or indirectly derived from agriculture. In Pakistan education is not very good. In Pakistan the education status are: 71 percent at boys and 37 percent at girls. Yes this is a very low number for education status. Health services are not good too. Pakistan is facing with hepatitis B and C and malaria (according to <https://iris.who.net>).

For Centre for Studies in Food Security (CSFS) 5 basic principles of food security is; availability, accessibility, acceptability, adequacy and agency. FAO's main purpose is to achieve food security for all and make sure that people have access to enough high-quality food to lead active, healthy lives. Pakistan is hotspot of very high concern, this hotspot has a high number of people facing or projected to face critical levels of acute food insecurity it is worsening day to day and we are expecting life-threatening conditions in the coming months (according to: <https://www.fao.org> ). But Pakistan is doing projects about: agriculture, famine and farming.

Food insecurity is bad situation but we have to solve it for solve this problem we may:

1. Reduce unnecessary food waste
2. Raise people awareness about food insecurity
3. Diversify protein sources
4. Strengthen water sources

As you see we are facing with very difficult problems and we can't solve these problems by ourselves so;

We are waiting support and financial support from member states, UN and NGOs.

Thank you for your interest and understanding.

Thanks
