

Committee: DISEC-1

Agenda: Advancing Global Efforts For Nuclear Non-Proliferation and Disarmament

Country: South Korea

In past, seven years ago with the approval of one hundred ninety-two members of the one hundred ninety-three members of UN General Assembly, Treaty on Prohibition on nuclear weapons was signed. Before this the first and only nuclear attack was made to Hiroshima and Nagasaki. South Korea knows that nuclear weapons are very big problems.

South Korea also got affected by this situation. But as the public becomes more affected by this, it will not be possible to keep them calm. Health problems that arise due to this may be controllable. This is also negative for nature and living things. Radiation is very risky for nature, living things and humans. Armament is another problem that needs to be prevented.

South Korea believes that we will solve problems as soon as possible thanks to our abilities. We support the organizations to solve these problems. As model United Nations we should increase inspections. And make sure there aren't any new nuclear weapons.
