

Country: Belgium

Committee: DISEC

Agenda: Advancing Global Efforts for Nuclear Non-proliferation and Disarmament

As one of the smallest and most densely populated European countries, Belgium is home to several linguistic groups and has a population of approximately 11 million people. Belgium recognizes the necessity of addressing global threats to international security. With a free-enterprise economy, Belgium attaches importance on promoting economic freedom and stability. However, nuclear weapons pose a severe threat to global security and must be addressed urgently.

Nuclear weapons are a global threat that needs to stop now. As Belgium, we are a party to the Nuclear Non-Proliferation Treaty (NPT) since 1975. It is important to help solving this global problem. Belgium considers international security as a top priority. Belgium is in favour of a global approach and balanced progress in the field of disarmament and non-proliferation, with a focus on both conventional weapons and weapons of mass destruction. Belgium has traditionally been a strong defender for nuclear non-proliferation and disarmament. As a member of the European Union (EU) and NATO, Belgium aligns with their respective stances on nuclear disarmament and non-proliferation efforts. So, Belgium's perspective on nuclear non-proliferation and disarmament is characterized by a commitment to multilateral agreements and efforts to reduce and eventually eliminate nuclear weapons globally.

Belgium emphasizes the importance of engaging with countries that have not yet signed the NPT, urging them to join the treaty and contribute to global efforts towards nuclear disarmament to create a safer world for all of us, and to create a safer and cleaner environment for both now and the generations to come. Education and raising awareness are the most crucial steps to take. Public conferences and seminars can help us raise more understanding among the community. These are important to make the world safer and better.
