

Denmark is a country that hosts 5,916,212 people. As Denmark, our priority is our people. For their safety, we have taken it upon ourselves to remove our weapons from the country and prevent events that will cause war.

One of the issues we have been focusing on for years is nuclear weapons. We have a very serious policy on nuclear weapons. At the same time, we have constantly approved agreements and treaties to stop the production of nuclear weapons, and we think that it is a good decision that only people with a good license and soldiers from the public can use small arms.

There are still problems with nuclear weapons and weapons in many parts of the world, however, as Denmark, we have a lot of work on this issue, we aim to make other countries think like us as much as we can. In this way, we can ensure a peaceful world.

We have a solution: First of all, as we have said many times, a good license should be required for access to small arms and light weapons, and nuclear weapons should be removed from countries. The production of nuclear weapons should be stopped if possible.
