

## **Committee: Food and Agriculture Organization**

### **Agenda Item: Combating Food Insecurity and The Risk Of Famine**

#### **Country: India**

One of the biggest problem in the world is food insecurity and the risk of famine. Uncontrolled population increase and global warming makes the problem bigger. India is a country in Southern Asia, bordering the Arabian Sea and the Bay of Bengal, between Burma and Pakistan. India has the world's second highest population. India's population is 1,44 billion. The sources of livelihood are textile, industry, manufacture, service industry but the main source is agriculture. %60 of the labour work in agriculture. India, which deeply feels the issues of poorly functioning education and healthcare systems, with agriculture being its primary source of livelihood, is rapidly in favor of finding solutions to food insecurity and famine risks.

There are in the past, in the years 1770, 1793, 1879 three huge famine in India. Effective combating against famine was only possible with green revolution. India has to feed huge population with limited resources. And this makes India has to develop new and effective strategies against food insecurity and the risk of famine. As known England has big effect on all systems in India. After England, India continued to develop it's education, health systems as specially agriculture systems. The green revolution, an international agricultural revolution, came to the aid of India as well as other countries. Thus India increased its agricultural productivity. India is open to all kinds of collaborations to maximize sustainable and healthy food production by using its resources effectively.

India's first precaution is native seed, proper irrigation. As a part of solution we care about smallholder farmers' training. Another suggestion is to make healthy food accessible by reducing costs from production to consumption. As it is known, there are serious problems in accessing healthy food in conflict zones. The UN needs to step in to solve this dimension of the problem. To sum up, we expect everyone in this committee to be aware of this great danger, to produce solutions on a global scale and to implement them.
