

Conference: HUTRAIN'24

Conference: HUTRAIN'24

Committee: IAEA

Country: OMAN

Agenda Item: Technology and Infrastructure For  
Prevention, Detection, and Responses Regarding

Nuclear

Security

Nuclear security started to become an important topic since countries decided to use nuclear energy instead of using other renewable energy resources. Because most of the countries are still developing , they aren't able to produce their own arsenal and they cannot establish their own power plants.

As the delegate of Oman, we suggest that the amount of nuclear weapons and other equipment that is related to nuclear science should be reduced and should be used for other kinds of sustainable projects and the budget which was planned to be used to manufacture nuclear weapons should be invested to prodigies that are focused on nuclear science.

As a result, countries should find sustainable and nature-friendly energy sources instead of using nuclear power plants or weapons. At the same time, we should take into account the warnings previously made by scientists who used to devote themselves to nuclear science and ask professionals who are knowledgeable on this subject to raise our public awareness. In this way, the world can become a more livable place
