Country: China

Commitee: World Health Organization (WHO)

Topic: Climate Change

China is a large country located in East Asia, bordered by 14 countries and with a long coastline along the Pacific Ocean. The country has a population of over 1.4 billion people, making it the most populous country in the world. While Mandarin is the official language, there are many different ethnic groups and languages spoken throughout China, with the Han people being the largest group.

Climate change is a big threat to human health. It affects the physical environment as well as human health. Climate change is impacting human lives and health in different ways. It threatens clean air, safe drinking water, food supply, and safe shelter. It causes droughts, hurricanes and floods, these climate extremes are driving more people into hunger and poverty.The most affected countries are Sudan,Madagaskar and Pakistan. Climate change may also lead to a wide range of extreme weather events in China, including typhoons, floods, blizzards, windstorms, drought, and landslides. China was responsible for more than a quarter of global greenhouse gas emissions in 2019 and this is one of the main causes of the climate change. Thats why, China takes actions against climate change and is committed to helping other countries.

China suggests that the UN should focus on supporting projects that increase solar and wind power capacity in the countries.It is also important to reduce fossil fuels and carbon footprint. China is ready to work with other countries to make sure that everyone can Access clean energy and power this is important for improving living conditions worldwide.
